

AUST ASIA EXPLORATION AND MINING SERVICES P/L

ABN 30 563 494 285

Practical geologist applying experience to the exploration and mining industry

Resume

Phil Mattinson

Qualifications and Professional Affiliations

M.Sc. (Geology) (1987)
**University of Western
Australia.**

AIG (Fellow)

Cottesloe WA 6011

Background

Phil is a geologist with experience in exploration, resource development and production in the Aust-Asia-Pacific region. During the last five years he operated as an independent geologist involved in near mine exploration and resource studies.

Expertise

• Exploration Experience

Phil's exploration expertise has been developed from 15 years experience in project generation and subsequent implementation of exploration programs in the Aust-Asia-Pacific region for gold and base metals.

His most recent programs include the search for platinum-gold-uranium mineralisation in the Rudall River area and gold exploration in the Laverton and Leonora Districts.

The Laverton program required the capture of a comprehensive data base in Micromine and its subsequent compilation and interpretation resulted in the drilling of numerous additional targets. Recent data compilations have included gold and base metal projects in the Halls Ck mobile zone.

Generative studies have included those in the Laverton district of WA, Cape York in NE Queensland, the Halmaheras and Kalimantan in Indonesia.

• Data Visualisation

As a result of consulting to numerous mine sites Phil has utilised Surpac, Datamine, Micromine and Minemap for exploration, resource modeling and grade control activity.

Phil has attended recent Access and Surpac Vision (V4) training courses so as to upgrade those skills necessary for efficient data base management and geological modeling.

• Unpublished Papers.
